

## DS3 Advisory Council Meeting Actions from last meeting

The following actions from the previous Advisory Council are below

1. TSOs to investigate if regular data (e.g. hourly) for the total system inertia can be published on the EirGrid website in a similar manner to the frequency data (TSOs)
  - a. *This matter was investigated in detail. However, to ensure confidential plant information is respected, it was decided not to publish the data. This reflects the relatively small number of generators in the SEM market and the potential to inadvertently reveal plant data*
2. TSOs to consider adding an agenda item for the next DS3 Advisory Council to discuss the impact Network Codes will have on the DS3 Programme. (TSOs)
  - a. *EirGrid, as TSO, is closely monitoring the impact of the Network Codes on the future power system in Ireland and Northern Ireland – this includes DS3. For example, this could result in changes to current plant behaviour. This will continue to be monitored on an ongoing basis and will be discussed at current and future industry forums dedicated to the Network Codes.*
3. TSOs to publish industry responses to the Alternative / Complementary Solutions Phase 1 report if the appropriate permission was granted. (TSOs)
  - a. *The industry responses to the Alternative Phase 1 report were circulated to the members of the DS3 Advisory Council. The responses have also been uploaded to the <https://eirgrid.app.box.com/ds3workshops> page.*
